5M BTU - 18M BTU Biomass Grain Dryer Hot Air Drying Systems

Our re-engineered BioGrainDryer connects directly to your existing dryer, using the existing dryer fans instead of having to add high-powered, specialized blower fans, which makes the system simpler and more affordable. This efficient design also eliminates the need for complex air mixing boxes. The BioGrainDryer can be fueled by crop residue and wood waste, it is fed automatically through a hopper and auger system. With over a decade of successful installations, our system is trusted for its reliability and performance in the field!

Affordable & cheaper than the traditional system:

- Easy Integration
- Fully Automated Ignition
- Automatic Fuel Feeding
- Superior Drying Power
