**SIM – MILTI-FUEL, MOVING GRATE, BIOMASS BOILER with AUTOMATIC ASH REMOVAL & WALKING FLOOR FUEL STORAGE & TRANSFER SYSTEM**

Of all the solid fuel/biomass storage technologies available we have found the reciprocating floor system to be the most adaptable, simple and low maintenance. The reciprocating or more commonly referred to as a “walking floor” is a fuel storage/handling system that allows bulk biomass fuel to transition from a storage area into the fuel feed circuit as called for by the power system it is supplying.
